

## Deal of the day!

### Dell G15

The Dell G15 (2022) is a budget gaming laptop available with Intel 12th Gen CPUs and NVIDIA dedicated GPUs. It's the 5520 model, and it replaces the Dell G15 5511 from 2021 with Intel 11th Gen processors. It looks almost identical to its predecessor, with the biggest change being Intel's 12th Gen Alder Lake CPUs, which sport a new hybrid architecture with a mix of performance and efficiency cores. Other changes include the addition of a QHD 240Hz display and an NVIDIA GeForce RTX 3070Ti GPU option, as well as Thunderbolt 4 support on models with an RTX 3060 and 3070Ti.

Our Dell G15 has an Intel Core i5-12500H CPU, an NVIDIA GeForce RTX 3050 GPU, 8GB of memory, and 256GB of storage. You can upgrade the CPU to an Intel Core i7-12700H, which has two additional performance cores. The NVIDIA GeForce RTX 3050 is the base GPU configuration. If you want better performance, you can upgrade to an RTX 3050TI, RTX 3060, or RTX 3070Ti. You can configure the laptop with up to 32GB of memory and 1TB of storage in the form of a PCIe NVMe SSD. There are also multiple display options, including a 1080p 120Hz, a 1080p 165Hz, and a 1440p 240Hz panel.

### Asus ROG Strix Scar 17

It's safe to say that the new balls-to-the-wall Asus ROG Strix Scar 17 is one of the best performance filled gaming laptops you can buy right now. The Strix Scar 17 is a thoroughbred gaming machine whose sole purpose is to run games without compromises. Everything from the design aesthetic to the internal components is focused on that singular goal.

Retailing at north of \$3,000, the Scar 17 has a superb build quality and packs the newest, fastest Intel i9-12950HX processor, an Nvidia Geforce RTX 3080 Ti, 32GB of DDR5 RAM, and a blisteringly fast FHD 360Hz 17" display. A similarly specced Razer Blade 17 costs almost \$500 more and doesn't quite match the performance of the Scar 17 .

The Strix Scar 17 looks and feels like a seriously powerful gaming laptop. It's big, bold, and has an edgy design aesthetic. The lid has a backlit ROG logo and hidden graphics that reveal secret codes(opens in new tab) under UV light while half the keyboard deck is translucent so you can see the internal components.

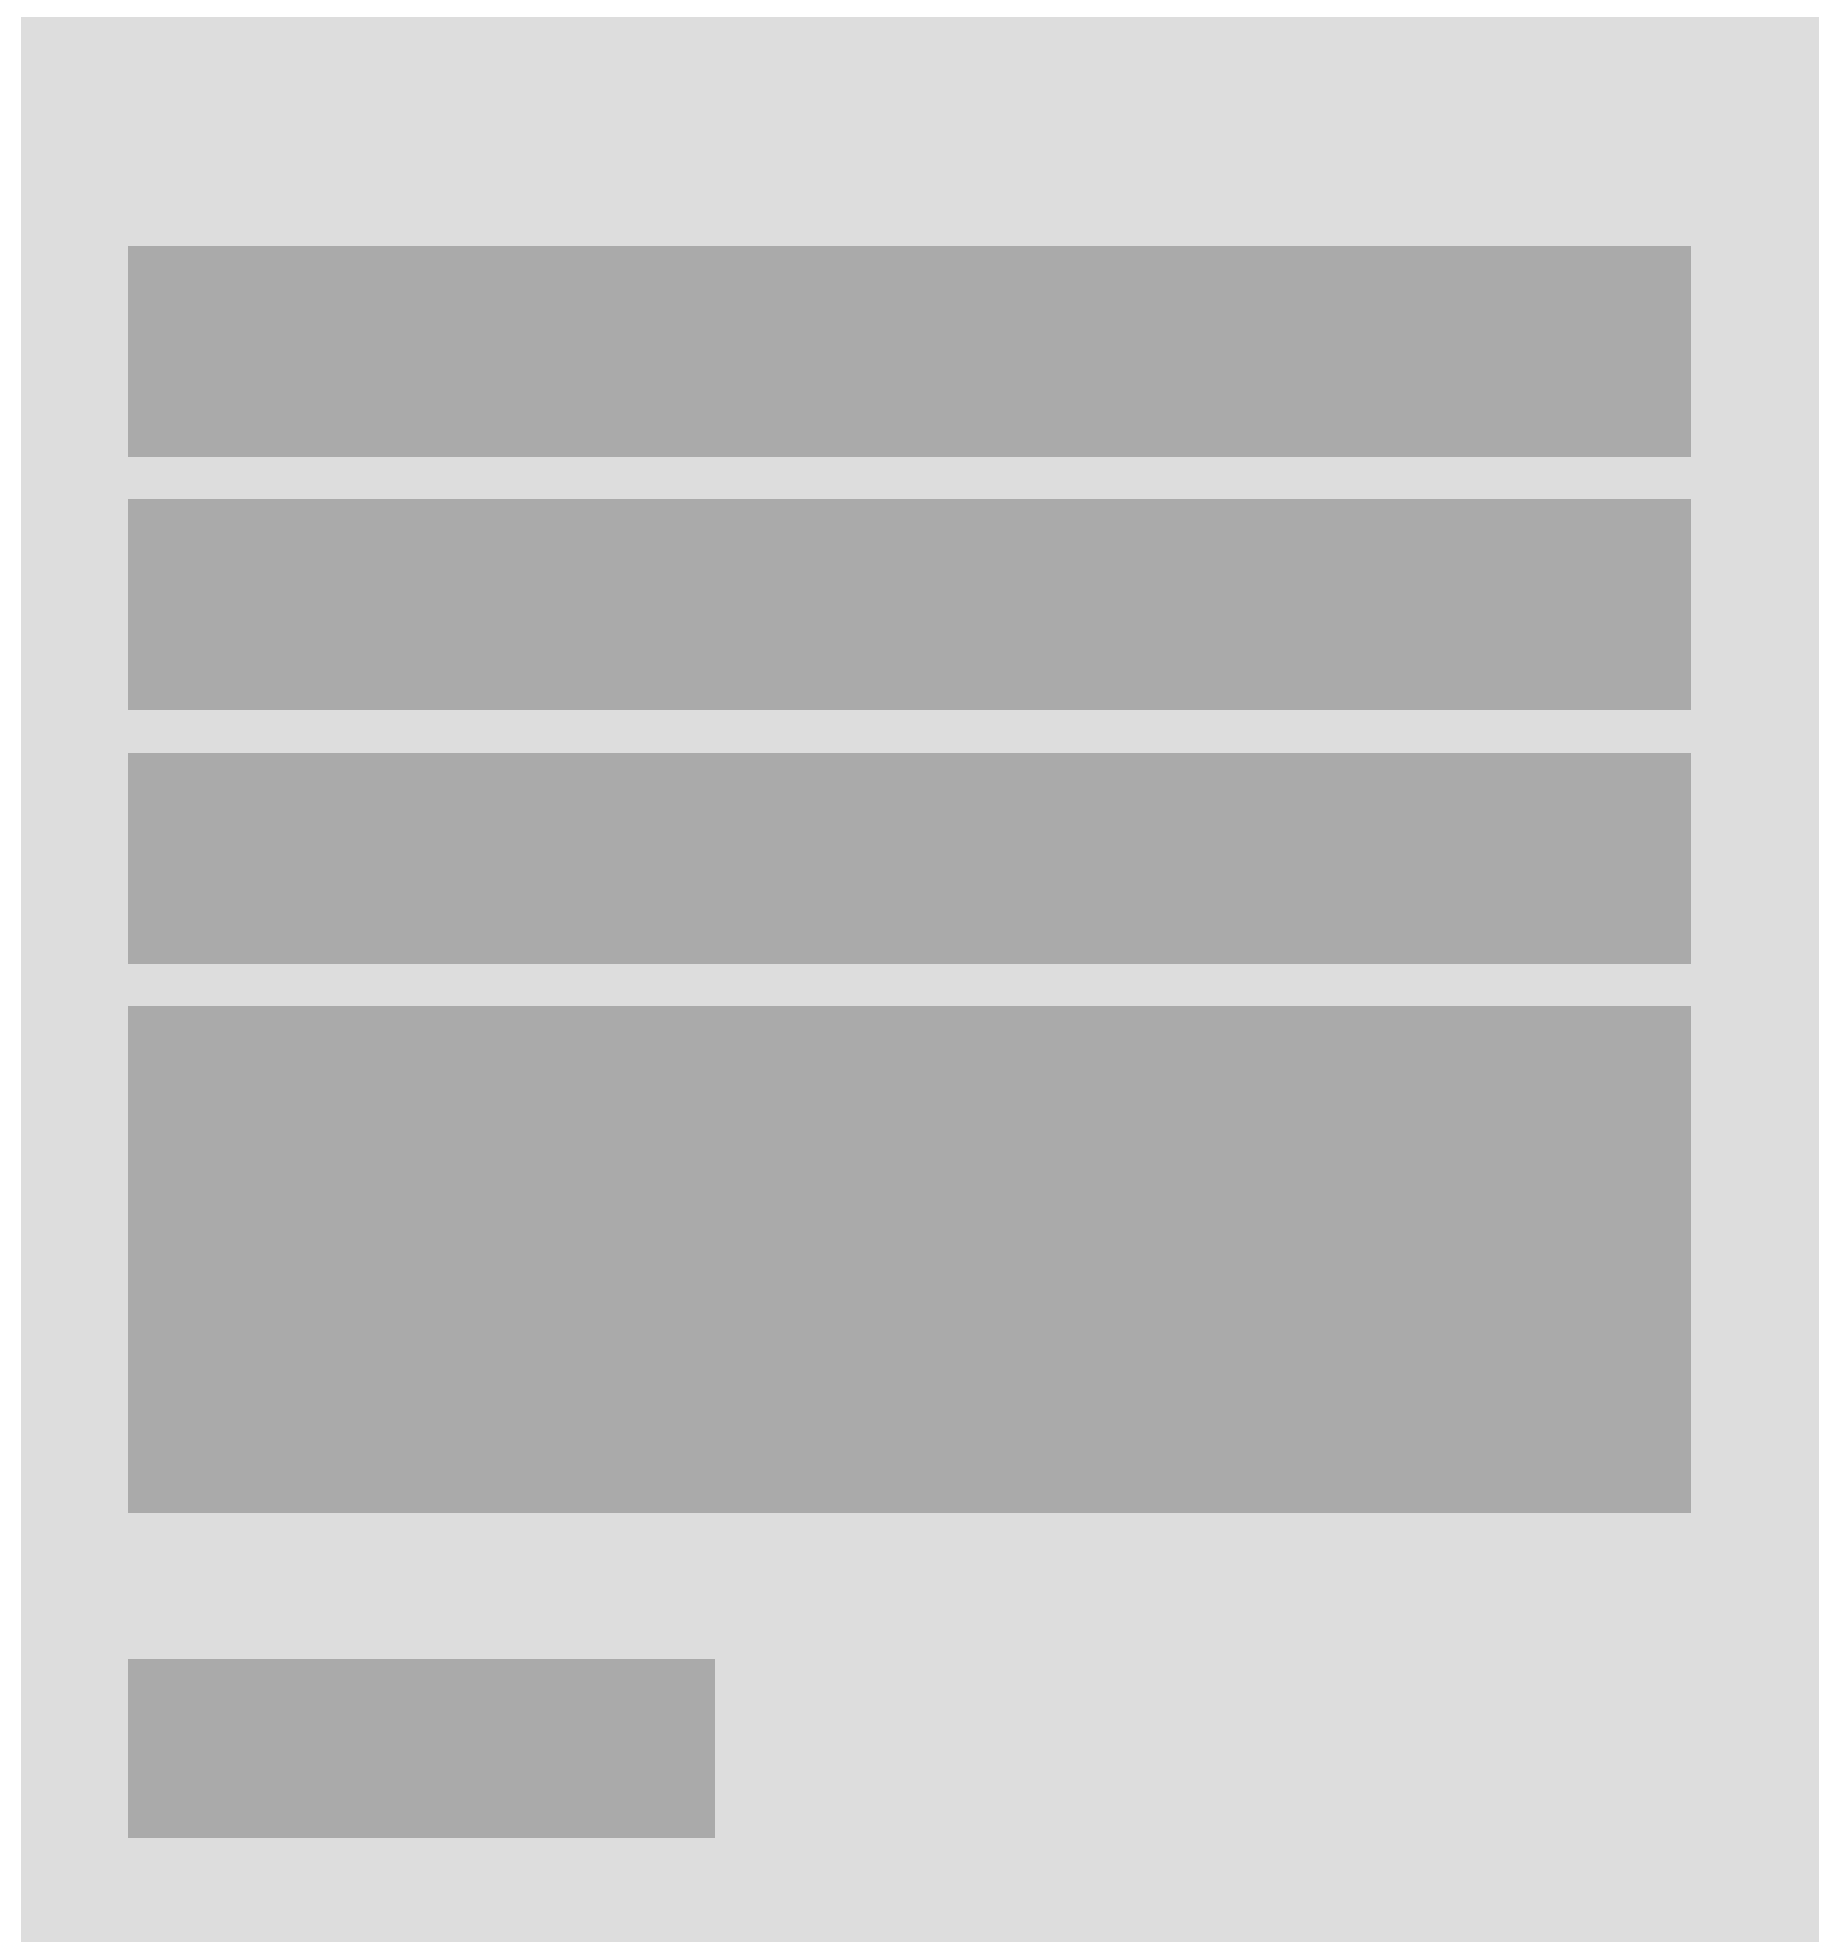

There's a vibrant, wrap-around Aura Sync RGB light bar that stretches across the front and sides with additional lighting on the bottom bezel of the display. The keyboard is also fully backlit and all the lighting is customisable in the Armoury Crate software hub.
